

*G*

in a main plane and upon which wheels or runners may be secured, and resetting spring means for urging both sub-frames toward each other; wherein the sub-frames are mutually pivotable and translatable relative to one another in the said main plane along a predetermined pole path fixed by the linkage.

REMARKS

Claim 19 was amended to remove the phrase "via a plurality of innerconnected links" so that the claim would address, among other figures, Fig. 8 of the invention.

Entry of this Amendment and allowance of claims 1-11, and 13-30 are respectfully requested.

Respectfully submitted,

WEBB ZIESENHEIM LOGSDON  
ORKIN & HANSON, P.C.
